

Omatic Cloud makes it possible for nonprofit organizations to have a common ingestion point of trustworthy, unified data.

### As organizations become complex, so do integrations

As non-profits grow overtime they struggle with different sources of revenue and other data being recorded in a patchwork of disconnected systems, which results in inconsistent and unreliable data that affects important decisions.

### Omatic Cloud offers a common ingestion to connect all sources of data

## Omatic Cloud enables you to:

- ✓ Have a common ingestion point across all data sources
- ✓ Ensure same high-quality data standards are enforced uniformly
- ✓ Provide data that is up to date, a complete supporter view that is error-free

## Your organization will be able to:

- ✓ Ensure every system in your tech stack exchanges data with each other for a full and up-to-date picture of your supporters
- ✓ Reduce time to value as new technology can be deployed with existing systems and infrastructure
- ✓ Indirectly drive donor revenue and retention when the organization can see a full and up to date picture of your supporters and provide a best-in-class supporter experience

## Omatic Cloud connects ALL data points
